# MethOp™

METHANE EMISSIONS TRACKING & REPORTING

MethOp is a web-based application designed by compliance and engineering professionals to help operators calculate, track, and report methane emissions and emissions intensity.

METHANE EMISSIONS TRACKING & REPORTING

- Enter methane emissions data from the field

- Handles all assets that will be regulated under 40 CFR 98

- Manage emissions records by type of asset

- All calculations are done in real-time

- Generate data analytics and trends

- Produce comprehensive reports with ease

- Individual access and permissions

- Secure, 24/7 security and intrusion detection systems and daily backups

Trusted Partners

MethOp is built upon our TaskOp application. RCP TaskOp™ clients include companies and organizations ranging from major oil and gas companies, underground gas storage operators, and refineries to mid-size chemical plants, terminal operators and small municipalities, including the following:

Boardwalk	**INEOS**
Cardinal	**LG&E**
Delek	**Oiltanking**
Dominion	**TC Energy**
Enable Midstream	**Williams**
Glacier Oil	**West Texas Gas**
Houston Fuel Oil	

TaskOp™ is a web-based application that is completely scalable and capable of managing everything from individual assets and small divisions to large enterprises with multiple facilities and business units.

"Developed by compliance professionals for compliance professionals."
